

Consumer Product Overview

Product Introduction

InBody Dial (H20)

InBody BAND2

InLab

InBody Dial

Tracking your progress with a normal weight scale is limited. What really matters is body composition. Increasing muscle and losing fat makes your body slimmer, metabolically active and healthy. The InBody Dial changes the paradigm of a normal weight scale, starting from percent body fat, muscle mass, BMI to visceral fat level.

PBF

Percent Body Fat

SMM

Skeletal Muscle Mass

BMR

Basal Metabolic Rate

VFL

Visceral Fat Level

BMI

Body Mass Index

InBody Dial

After every test, your results are recorded and organized in the InBody app. See your test history, spot trends and share your results with your personal trainer or doctor. Make adjustments based on accurate data, so that you are consistently trending toward the right direction.

ACCURATE AND PRECISE RESULTS

Get results you can trust with the smart weight scale created by the founder of modern BIA technology.

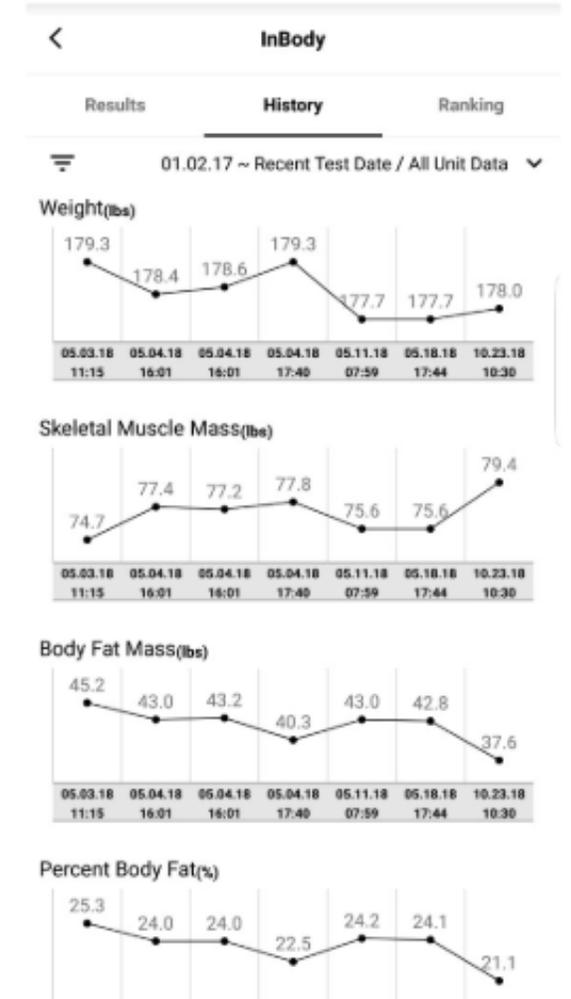

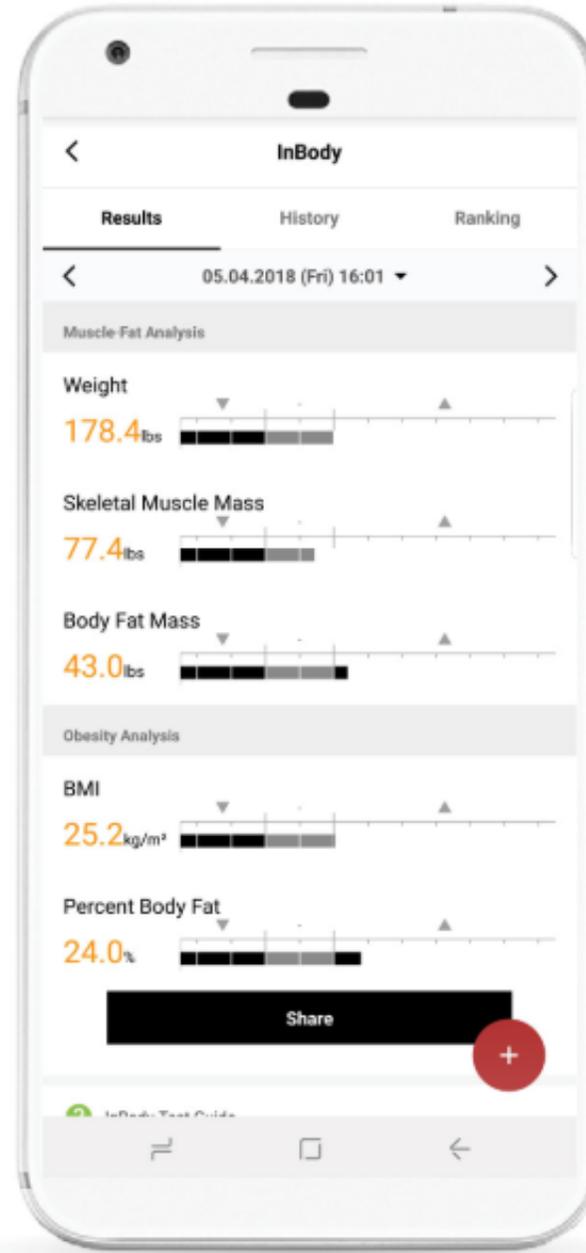

DATA THAT MATTERS

You'll get both your Percent Body Fat and BMI values so you can see how PBF is more accurate and reliable than BMI.

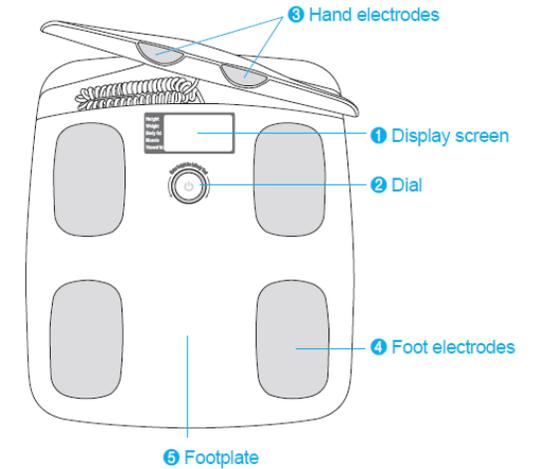

CONVENIENT TRACKING OVER TIME

Automatically view your test results on your phone in real-time. Check out your progress anywhere, anytime.

InBody Dial

Handle/Electrode

User holds the device with hands and fingers.

Display Screen

Height, weight, percent body fat, muscle mass, and Visceral fat level is displayed on the screen.

InBody BAND 2

The InBody BAND2 is the **world's first wearable body composition analyzer**. It measures your body fat, muscle mass and body fat percentage. Measuring your body fat percentage allows you to better know your health, helping you achieve your fitness goals by bring that percentage down. Also, it measures your movement to calculate steps, distance active time and calories burned. Easy Training Function allows you to select from 12 exercises, which will automatically track your workouts.

Activity Tracking

The InBodyBAND2 keeps track of the amount of steps you take, distance travelled, time and calories consumed during a 24-hour period. The device can also encourage you to increase your activity by sending “MOVE” notification. The InBodyBANDS2 will also send a “GOAL” notification once the targeted number of steps has been reached.

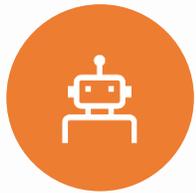

InLab

The InLab is a portable stadiometer that can measure one's height in a second. It uses an ultrasound sensor to measure an individual's height with pinpoint accuracy. Once leveled, the InLab can identify temperature, height and humidity to assess the area. It is a next generation tool with maximized utility.

InLab

Young kids have difficulty to stand still
